● NEKO HUSSER AI VIDEO AND IMAGE PRODUCTION REEL UPDATED NOV 2026

AI video and images, directed shot by shot and finished by hand.

I make short promo spots, consistent AI presenters, thumbnails and one-page websites for small businesses and faith-based media. Every clip is generated from a reference, checked against it, and fixed in the edit before it ships.

`Hailuo` `Kling` `Seedance` `Hunyuan Video` `Higgsfield` `Google Flow` `Gemini` `Photoshop` `CapCut` `FFmpeg` `n8n` `Wix` `Three.js`

REEL 01
PROMO SPOT
47.7 S · VERTICAL

Making Space, Erasing Waste

A vertical spot for a new local junk-removal company, built from the owner’s business card. The words for the junk pile up on screen with a thud each, then a yellow bar sweeps them off. It plays at the top of this page.

- Kinetic type system in the card’s black, green and yellow, with the phone number as the closing card.
- AI-generated B-roll: a cluttered garage that wipes clean, a homeowner pointing, a couch carried out, a trailer loaded.
- Voiceover from an open-source voice, a 112 BPM bed, and sound hits placed on the type.
- Loudness set to −14.3 LUFS (measured) for phone speakers. Delivered as 1080×1920 and 720×1280 MP4, with a one-page site to match.

Made as a free launch piece. The footage is AI-generated, so it shows the service and not the owner’s own crew.

WEBSITE
3D SIGN
LIVE

Famous ’Round Here: a one-page site with a 3D marquee sign

The public site for my local video agency, written as code and deployed to Wix headless hosting on the free tier, no template. The marquee sign is built in Three.js and turns with a finger on the phone. Three commercials play inside phone frames, with a jingle, pricing, and Call and Text buttons wired to the business line. Built and shipped in one day.

SYSTEM
AI PRESENTERS
2 PERSONAS

Presenters that stay the same person

Derrick and Naomi are AI-generated presenters for a faith channel. Each has a reference set, a fixed room and a rotating wardrobe, so the face, the set and the props look the same from one clip to the next. Both are AI-generated personas.

TYPE
THUMBNAILS
6 SHOWN

One image, one line of type

Thumbnails and Shorts frames from the channel’s own uploads, each built around a single strong image and a short line that reads on a phone. The wide one is a long-form thumbnail; the tall ones are frames from Shorts. View counts are the YouTube numbers for each video.

PRODUCT
AI SOFTWARE
PRIVATE BUILD

Kinetic Resume Online

A résumé, a job description and a headshot go in. A talking-avatar video of the candidate comes out. I own the product and worked closely with the developer to get it running. I handled the n8n automation: connecting the services, getting the API keys and wiring the flows so each step hands off to the next, in several different ways. The rest of the stack is Next.js on Vercel, Gemini for the scripts, an avatar video engine and Stripe for payments.

PROCESS
AGENT TEAM
HUMAN SIGN-OFF

A team of agents with a person at the gate

Day-to-day production runs through four roles. I direct all of it by voice, and nothing is spent, sent or published until I approve it.

Plan	Build	Check	Approve
Writes the brief, the script and the prompts.	Generates the clips, cards and files.	Tests each file against the brief and the rules.	Me. One tap before it goes anywhere.

How I keep a detail from drifting

FIVE CHECKS

Built on the presenter work above. The same checks apply to product shots, where shape, colour, controls and logos have to match the photo.

01 **Lock the reference**
One real photo, attached to every clip as the exact opening frame, with the subject, set and props named in the prompt.

02 **One action per clip**
One camera move, stated first, and the subject anchored to a fixed object in frame so it does not float. Zoom moves also fix the background.

03 **Check each clip against the reference**
Face, colour, ring, tattoos and props for a presenter. Shape, controls and logos for a product. A drifted clip is regenerated, not shipped.

04 **Fix by hand in the edit**
Trim, re-time, swap a clip and match audio in CapCut and FFmpeg. Spoken lines stay short enough to fit the clip length.

05 **Log it**
Each clip keeps its prompt and result, so a retake matches the original.

Tools I work with

AS OF NOV 2026

GENERATE VIDEO
- Hailuo
- Kling
- Seedance
- Hunyuan Video
- Jimeng
- Higgsfield
- Google Flow
- Grok
- Motion16
- HeyGen avatars

GENERATE IMAGES
- Gemini

EDIT, IMAGE AND SOUND
- Adobe Photoshop
- CapCut
- FFmpeg
- Kokoro voices

AUTOMATE AND BUILD
- n8n
- Wix headless
- Three.js

NEKO HUSSER

Footage and presenters on this page are AI-generated. Reel 01 was made as a free launch piece for a new local business. For product and promo video work, message me here on LinkedIn.
